Chapter 1. Simple discrete-time models of single populations
Chapter 2. Density dependence I: Equilibria and stability
Chapter 3. Density dependence II: Cycles and chaos
Chapter 6. Age-structured models
Chapter 8. Spatial models
Chapter 4. Continuous-time models
Chapter 9. Multispecies discrete-time models
Chapter 5. Stage-structured models
Chapter 7. Metapopulation models
Chapter 18. Dynamic vegetation models
Chapter 10. Multi-species continuous-time models
Chapter 15: Metacommunity theory
Chapter 14. Island biogeography theory
Chapter 19. Carbon- and nutrient-flux models
Chapter 11. Introduction to community ecology
Chapter 16. Neutral ecological theory
Chapter 20. Biomass–diversity models
Chapter 12. Competitive interactions
Chapter 17. Towards unified models of community ecology
Chapter 13. Predator–prey interactions
